

**Drip irrigation :
Jain's forte**

■ Drip irrigation systems are mainly water-saving devices through which water is dripped exactly at the root of the plants via a network of pipelines, thus avoiding the loss of water, either through evaporation or seepage. The Jalgaon-based Jain Irrigation Systems are the only manufacturers of these systems in India. The idea of drip irrigation is now catching as so much so that the Chief Minister of Gujarat,

Chimanbhai Patel has gone on record stating that, "Drip irrigation can revolutionise Indian agriculture."

On a visit to the Jalgaon plant, the CM evinced keen interest in the product and invited Bhawarlal Jain, Chairman, to participate in the development of agriculture in Gujarat in a big way. He later inaugurated Jain's 100% EOU to manufacture various drip irrigation components, PVC foam sheets and well casing pipes.

Jain Irrigation : Impresses Patel
